ABOUT ME

Full-Stack Software Engineer and Computer Science Master's student specializing in Cybersecurity. Currently focused on developing robust ERP software, where I apply my skills in both frontend and backend ecosystems. I thrive in Scrum teams, demonstrating high initiative and a proactive approach to problem-solving. Beyond daily coding, my technical passion lies in System Design, various API protocols, WebSockets, and asynchronous messaging. I leverage my 9+ years of programming journey and strong background in hardware, networking, and databases to deliver secure, scalable, and comprehensive solutions.

SKILLS

- C# / .NET
- TypeScript / Angular
- Agentic AI Devin
- Tailwind / AM / PrimeNG
- AMQP [RabbitMQ]
- MSSQL / PostgreSQL / SQL
- Redis
- Git / Docker
- WebSockets [SignalR]
- Agile / Scrum

LANGUAGES

- Polish: native
- English: B2

HOBBIES

- Travelling
- Photography
- Gym
- Running
- Fashion

EDUCATION

COMPUTER SCIENCE

Cracow Univeristy of Technology | october 2021 – january 2025

CYBERSECURITY

Cracow Univeristy of Technology | february 2025 – now

EXPERIENCE

JUNIOR SOFTWARE ENGINEER

Comarch | July 2025 – Present

Development and maintenance of a complex, modular ERP system designed to optimize enterprise business processes (logistics and finance).

- Developing responsive, modular user interfaces and managing complex application states in Angular using reactive signals and RxJs.
- Designing and implementing secure, scalable RESTful APIs and business logic using .NET Core / C# and Entity Framework Core
- Actively participating in System Design discussions, applying SOLID principles, and adhering to Clean Architecture practices
- Optimizing complex SQL queries, database schemas, and data migrations to ensure high performance under heavy data loads
- Working actively within a self-organizing Scrum team, taking proactive initiative during sprint planning, refinements, and code reviews to improve overall code quality

PROJECTS

CERTIFY LITE

React + Solidity + Blockchain Ethereum + Metamask
[Live demo](#) [Github](#)

An application that leverages blockchain technology to ensure file authenticity by storing their hashes on the blockchain. Users can verify the integrity and originality of a file by comparing its hash with the one recorded on the blockchain. This approach utilizes smart contract logic to guarantee tamper-proof automation, providing a highly secure and transparent method for file verification.

TRAVEL TRACE

Angular + .NET + PostgreSQL
[Github FE](#) [Github BE](#)

A comprehensive full-stack web application for tracking and visualizing travel logs. Developed a scalable ASP.NET Core API utilizing CQRS pattern via MediatR for clean separation of concerns, alongside an Angular SPA with RxJS. Implemented real-time updates using SignalR and integrated Hangfire for scheduling automated background tasks and data processing.
